

FOOD-WEBS WORKSHOP

Exploring the scientific and management implications of upper trophic level interactions in the Sacramento-San Joaquin Delta

November 8-9, 2023

Location: Sacramento, address TBD

8:30 AM to 4:45 PM

Event Details:

The Delta Independent Science Board is hosting this two-day hybrid workshop as part of its **food-webs review**. The workshop will evaluate the degree to which the inclusion of food-web interactions across trophic levels could benefit and facilitate ecosystem management and whether the available data and science can support the development of tools (such as models). It will include presentations from scientists, managers, and stakeholders with experience in food-web dynamics, ecology, and more; lightning talks; breakout groups; and panel discussions with experts from fisheries, non-profit organizations, and academic institutions.

It will also feature a poster session, which is **open for submission** through October 23.

Register to attend in person or virtually.
