

## Active Projects List

The tables below highlight a sample of active projects for Council member review. Active projects include both potential covered actions and related plans and projects. An explanation of Column 4, Status, is provided on the final page.

Changes since July 2026 are denoted with an asterisk (\*) and in italics. The total number of projects added and removed will be tallied after final review.

### *State Projects*

| State Project Name | Location (County) | Lead Agency                         | Status                                                                       | California Environmental Quality Act (CEQA) Status | Description                                                                                                                                                                                    |
|--------------------|-------------------|-------------------------------------|------------------------------------------------------------------------------|----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Delta Conveyance   | Delta-wide        | Department of Water Resources (DWR) | Project Remanded 4.23.26; Revised Certification of Consistency filed 7.24.26 | Final Environmental Impact Report (FEIR)           | A facility to convey water from the Sacramento River in the north Delta directly to the existing State Water Project (SWP) and Central Valley Project (CVP) pumping plants in the south Delta. |

## Status Types

Active projects include both potential covered actions and related plans and projects of interest. The active project “Status” reported above is not sequential but tends to align with certain phases of the CEQA process. The relationship between generalized steps in the CEQA process (top row) and generalized status types (bottom row) is illustrated in **Figure 1**. Each status type is described in more detail below.

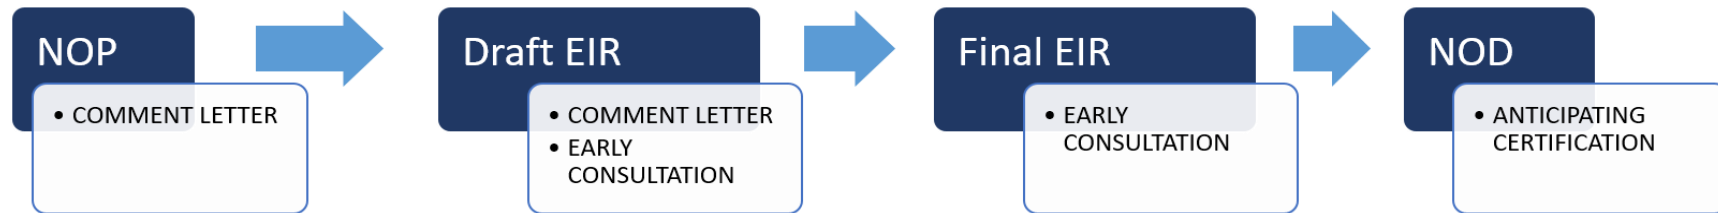

Figure 1. Typical Project Sequence

**Coordinating:** Occasionally, the Council will coordinate with state and local agencies prior to the initiation of the CEQA process in order to track and/or inform project formulation. Coordination may include informal discussions or attendance at project planning meetings.

**Comment letter:** Council staff prepare comment letters in response to each phase of the CEQA process leading up to a final document (e.g., Notice of Preparation [NOP], Initial Statement [IS], Negative Declaration [ND], Mitigated Negative Declaration [MND], Draft Environmental Impact Report [DEIR]). The Council may also comment on other interim studies and reports, as needed. The Council comments on potential covered actions as well as on long-range plans identified in the Delta Reform Act (Wat. Code section 85212) and projects located outside of the Delta that will have a significant impact on the Delta (Wat. Code section 85210[j]).

**Early consultation:** The Delta Reform Act directs the Council to offer early consultation to assist state and local public agencies in preparing certifications of consistency (Wat. Code section 85225.5). The timing and frequency of early consultation are at the discretion of the project proponent.

**Anticipating certification:** Council staff anticipate a certification of consistency once a notice of determination (NOD) has been issued. Proponents of covered actions must file a certification of consistency prior to project implementation (Wat. Code section 85225). The timeframe between NOD and implementation varies.
