

DELTA HARMFUL ALGAL BLOOMS WORKSHOP

Towards Developing a Community Monitoring Strategy

November 8-9, 2022

#DeltaHABsStrategy

Monitoring harmful algal blooms (HABs) is critical to protect water quality and public health. But, there is no comprehensive program, strategy, or funding to do so. As such, the Delta Science Program is hosting a two-day hybrid workshop focusing on nexuses where HABs monitoring and data collection can be optimized to create a strategy for the Sacramento-San Joaquin Delta. This workshop will facilitate the collaborative development of a monitoring strategy. Attendees will hear presentations from subject matter experts and participate in breakout sessions. In-person attendance will be hosted at the California Natural Resources Headquarters (715 P Street, Sacramento, CA 95814). Virtual attendance will be hosted via Zoom.

The registration link will be released in early fall.
